Style Guidelines

- Aim to at least meet WCAG 2.1 level AA requirements(Accceccible)
- Low contrast form field versus high contrast form field (input border)
- Have a logical reason for every design detail
- Secondary text(paragraphs) is less important than headings, so it's made less prominent (using size and contrast) to create a clear visual hierarchy
- Secondary(paragraphs) text line height is at least 1.5 to improve readability
- Minimise interaction cost (clicks, scrolls, typing, reading, searching.. add to interaction cost)
- Keep related actions close
- Reduce distractions, remove unnecessary styles
- Minimise choice (Reduce choices to speed up decisions)
- Remove unnecessary form fields
- Create a clear visual hierarchy to show the level of importance of information
- Use conventional design patterns that people are familiar with. (accordions)
- Reveal less important information gradually (progressive disclosure)
- grouping or categorising the options(to make choices easily)
- Search boxes often suggest common search terms
- use design system to be consistent, (follow platform guidlines... e.g ios/)
- indicate interaction states of buttons (adding a variant) (Deafult , hover, press, focus, disabled)
- make sure that you're not removing critical information or details (Make sure important content is visible)
- Design for the smallest screen first (mobile first approach)
- create a design system (layout, spacing, typography,color, shadow,border radius,)
- Space elements based on how closely related they are
- 12 column grid
- Use a type scale to set font sizes
- Use at least 1.5 line height for long body text

Hello, I'm Nebiyou Chanie

Software Engineer focused on creating functional, user-friendly web experiences and software solutions.

[Contact Me](#)

About Me

I am a software engineering student at Addis Ababa University with a passion for creating functional and aesthetically pleasing web applications. I focus on building user-centric solutions and have a strong interest in design. I use design tools like Figma to bring my ideas to life and ensure a smooth user experience across all my projects.

I have experience building web applications using

- JavaScript, HTML, and CSS. I focus on creating clean and responsive designs for a seamless user experience.

Familiar with web design principles and proficient in using

- Figma to create UI/UX designs that are both functional and visually appealing.

I am also learning React, which helps me build interactive

and dynamic front-end applications efficiently.

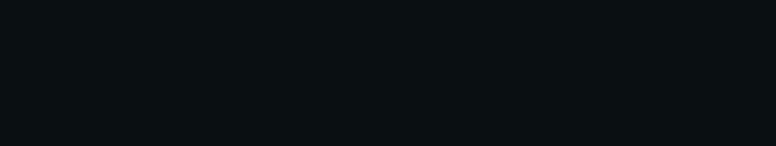

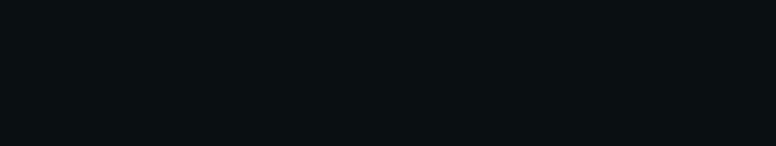

Proficient in using Node.js to develop scalable and

- efficient backend systems, allowing seamless communication between the client and server.
